

2dye4 @ Zigzag Angelina Fibre and Film List#

Fantastically fun, all "hot fix" Angelina, whether in fibre or film form, is heat bondable – it bonds when heat and pressure are applied. Place it between two sheets of paper towels or pressing sheets, iron on silk setting for 3 seconds and it becomes a shiny sheet of polyester fabric that can be stamped, stitched, glued, bonded, embellished . . . the possibilities are truly endless! And, it's machine washable!

Angelina Fibre is a new, very fine (sized as small as 10 denier), unique fibre. Light reflective, as well as light refractive; Angelina is incredibly luminescent while (unlike regular metallic's) it has an extremely soft hand. Blended with other fibres in amounts as small as 2%, it gives sparkle and highlight to your threads, yarns, art quilts, or surface design and embellishment project.

Angelina bondable fibres - **Heat bondable AKA Hot Fix:** These fibres can be ironed at a low temperature to fuse them together. You can mix with non bondable colours in any combination and use the Heatbondable fibres as the "glue" The end result will be determined by the temperature, pressure from the iron and time used to heat the fibres. Generally, these fibres will not fuse to any other fibre, paper or other medium except itself.

All of our Angelina fibre is packaged into 5 gm packs.

AF001 - Angelina Bondable Fibre 5gms Wisteria

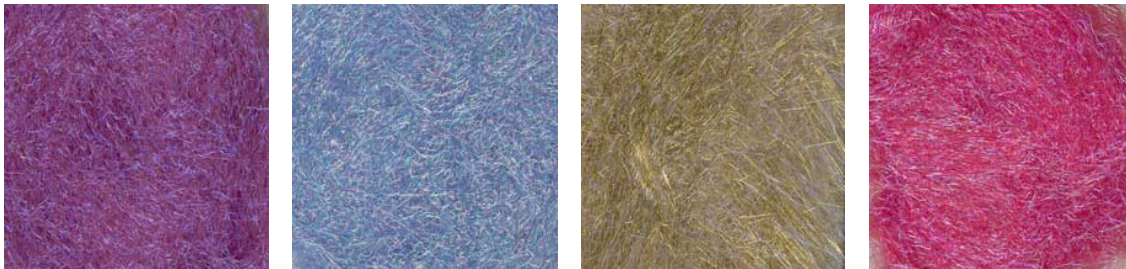

AF020 - Angelina Bondable Fibre 5gms Wisteria Half Deckle

AF002 - Angelina Bondable Fibre 5gms Forest Blaze

NON Bondable Angelina Fibres

Staple (NOT Heatbondable): The Staples do not adhere to themselves or the heat bondables. Heated on a higher temperature may get it to fuse but you may lose colour and/or sheen according to the manufacturer. Mixed with the heat bondables. You can use them anywhere. They can add a third dimension if you wish to let some fibres protrude from the surface of your artwork.
