

Friendly Plastic

Friendly Plastic® Designer Sticks are a durable, non-toxic plastic that can be used to create exciting and innovative accessories, home decor, jewellery and wearable art projects. Friendly Plastic® can be used in combination with your favourite rubber stamps, ArtEmboss® metal sheets, decorative paper, beads, wire and a variety of other embellishments available at your local craft store.

Unique two dimensional designs can be created with Friendly Plastic® designer sticks by softening and blending different colours together on a non-stick baking sheet, using a standard oven, toaster oven or electric griddle. Free form designs can be achieved by softening Friendly Plastic® in 140°-150°F (50°-60°C) water and then shaping with your hands, craft tools or any household object.

Friendly Plastic® cools and becomes hard again in just a few seconds when placed in cold water. It can also be re-softened for reuse or to make changes to your project when placed in warm water.

Friendly Plastic® Designer Sticks come in 73 primary and metallic colours. All colours are available in 1 1/2" x 7" sticks, individually

PLEASE NOTE: First colour indicates main colour - second colour indicates background colour of the plastic

Friendly Plastic

FP038 – Friendly Plastic Marbling Comb

This new Friendly Plastic® tool lets you create dynamic swirls in softened Friendly Plastic® quickly and easily. Simply cut strips of Friendly Plastic® to desired size and lay them side-by-side on a non-stick electric griddle. Heat strips at 200°C (300°F) until they blend together. Then, draw the teeth of the comb through the strips in a straight or wavy pattern and allow cooling.

The Friendly Plastic® Marbling Comb works just like a needle tool except it has nine teeth which allow you to make multiple, evenly spaced swirls at the same time.
